Product Intro & Purpose

WHERE CONNECTION BEGINS

Wavelength Intro

Where Connection Begins

Created by: Avery Boyer • Noah O'Donnell • Luke Wickline • Sam Garrett • Andrew Horton • Charles Thompkins

THE PROBLEM

Problem Statement: Walking into a new classroom is isolating for university students who don't know anyone, leading to anxiety, disengagement, and reluctance to participate.

OUR PURPOSE

We designed Wavelength to be a system where interaction is unavoidable and low pressure. The app is the bridge — the thing that gets a student warm enough to say yes when an instructor or classmate eventually invites them into something real, from a study group to a class discussion.

The Context	The Intention	The Result
College students arriving in large or first-year university courses where most people don't know each other.	Gives students a way to approach a classmate through a system that feels like play, not performance.	Makes joining a class community feel more comfortable by helping students build fun, familiar connections that encourage them to engage and return.

Set Up Instructions

WHERE CONNECTION BEGINS

Set Up Instructions

WHO DOES WHAT

Facilitator (Professor)	Helpers (TA / Volunteers)
• Syncs the App and Facilitator Code • Assigns color groups via app • Confirms each student's phone shows a color • Loads prompts on the room screen	• Clears floor space • Arranges desks/tables for group work • Helps students join the app at start of class • Does a final walkthrough of the room

STEP-BY-STEP

1

Check the app & roster Facilitator

- Open the Wavelength app and thoroughly read this Facilitator Playbook
- Confirm the class roster (or expected headcount) is loaded and the app is online

2

Prepare the room Helper

- Clear a center floor area — no desks or obstacles for Community Molecules
- Arrange one table or desk cluster per color group around the perimeter for group writing
- Place one pen and one sheet of paper at each table
- Post a QR code or join link at the door so students can open the app on arrival

3

Sync & assign color groups Facilitator

- Open the Wavelength app
- Enter your facilitator code (on this Playbook's cover page) to unlock facilitator access
- Enter expected student count and let the system calculate group sizes
- Prepare sequences of games ahead of time.
- Push colors to the class, each phone will display the color

4

Load room screen & prompts Facilitator

- Connect your laptop or device to the room display or projector
- Open your prompt deck and navigate to the first conversation prompt
- Confirm the screen is visible from all areas of the room

5

Final walkthrough Both

- Facilitator: confirm the app is functional and every student can see their color
- Helper: confirm the floor is clear, tables are set, and the join link is posted

Ready to begin class when:

✓ *All students can open the app and see their assigned color*
✓ *Floor is clear and tables are set with paper and pens*
✓ *Room screen is displaying the first prompt*
✓ *Join link or QR code is posted on the screen*
✓ *Facilitator has confirmed total connected student count*

Product Features

WHERE CONNECTION BEGINS

Product Features

01 The App

The connection layer every student uses on their own phone

The app is the anchor of the entire Wavelength experience. The color groups, game mechanics, and low pressure connection flows from the start of the session. It is designed to feel effortless to join and intuitive to use.

CORE FEATURES

Color display	Each student's phone shows an assigned color. The color sorts students into groups and drives interactive game participation.
Manual color override	If the facilitator allows, students can switch their own color with a tap. The facilitator can also lock or reassign colors from the facilitator view.
Live sync	Prototype: simulated Phones receive color assignments wirelessly. This keeps every device in sync across the room without students changing any settings.

02 The Game Library

A growing set of structured experiences built for the color-group system

The games are the content layer of Wavelength. The app supports any number of games — different formats, group sizes, energy levels, or learning goals — all organized around color groups.

LAUNCH GAME SET

#	Game	What happens
1	Frequency	Students form groups from their phone colors and follow conversation prompts to begin class integration.
2	Collective Biography	Groups stay together and create a biography of commonalities that are unanimously true of every member.
3	Two Truths Trade	A fast roaming game where students collect and guess truths from classmates across color groups.
4	Concept Clusters	A course-content twist — groups race to connect their color to an idea, term, or example from the class.

ADDING GAMES TO THE LIBRARY

Any structured activity that uses color groups as its organizing unit can be added to the library. Future games might include:

- Shorter warm-ups for the first five minutes of any class session
- Games designed for specific goals — cross-major mixing, peer-review pairing, or team formation for projects
- Course-content review games that fold the day's material into the color groups
- Instructor-designed custom games using the same color-group infrastructure

Plan & Pricing Options

WHERE CONNECTION BEGINS

Plan & Pricing Options

Wavelength is available in three plan sizes designed to match the scale of your class. What scales between tiers is the number of student seats, color groups, game options, and helpers recommended to run a smooth session.

Small Class Plan — $____

10 – 20 students

Perfect for seminars, labs, discussion sections, or pilot sessions

20
seats

What's included

- 20 student seats
- App access
- Facilitator guide (games + prompts)
- Full game library (Frequency, Community Molecules, Collective Biography, Two Truths Trade, Concept Clusters)

Medium Class Plan — $____

21 – 50 students

The standard Wavelength experience — designed for a typical lecture section

50
seats

What's included

- 50 student seats
- App access
- Facilitator guide (games + prompts)
- Full game library (Frequency, Community Molecules, Collective Biography, Two Truths Trade, Concept Clusters)

Large Class Plan — $____

51 – 100 students

Built for large lectures, first-year courses, and orientation sessions

100
seats

What's included

- 100 student seats
- App access
- Facilitator guide (games + prompts)
- Full game library (Frequency, Community Molecules, Collective Biography, Two Truths Trade, Concept Clusters)
- Recommended: add instructor-designed games for large-class energy management

	Small	Medium	Large
Student capacity	10 – 20	21 – 50	51 – 100
Seats	20	50	100
Color groups	3 – 4	5 – 7	8 – 10
Games included	Full library	Full library	Full library
Price	[$]	[$$]	[$$$]

Class Schedule & Structure

WHERE CONNECTION BEGINS

Class Agenda

WHERE CONNECTION BEGINS

Class Agenda

75-Minute Connection Session

The Wavelength session is designed to run in 75 minutes from first arrival to final exit — sized to fit a standard class block. The structure is fixed enough to be repeatable and flexible for different class sizes. The professor runs the session; a TA or helper manages the door, setup, and late arrivals.

Pre-class **15 min**	**Setup & color sync** *Led by: Facilitator* Facilitator syncs the roster, assigns color groups based on expected attendance, and clears floor space for Community Molecules. Students are not yet present.
5 min	**Arrival & app join** *Led by: Helper at door* Students scan the join link and open the app, which shows their assigned color, then take a seat. ▶ Late arrivals: the door helper stays at the entrance throughout. Any student who arrives late joins the app and is quietly pointed to their color group — no announcement, no disruption.
5 min	**Facilitator welcome & class intro** *Led by: Facilitator* The professor introduces themselves and the course. Take this time to share the goals of the class and its emphasis on building a learning community. Walk students through opening the app.
15 min	**Frequency** *Led by: Facilitator + room screen* Students find a small group whose phone color matches theirs. Once a group forms, an icebreaker prompt appears on the screen. After two minutes, colors change and students find new groups. Repeat 5 times.

15 min	**Community Molecules** *Led by: Facilitator* The floor is cleared. The facilitator calls group numbers and students form groups of exactly that size each round. Five rounds, structured to build energy: groups of 2, 4, 5, 3, 6. Students use the app to select color-coded responses to questions in real time. The last round becomes their group for the final game.

25 min	**Collective Biography** *Led by: Facilitator* Color groups sit together at tables. The one rule: every sentence in the biography must be unanimously true — if even one person says 'not me,' it doesn't go in. Groups spend 13 minutes in discovery, 7 minutes writing a flowing paragraph, then each group reads its biography aloud. After all are read, members use NameDrop to connect with the others at their table.

10 min	**Wrap-up & connect** *Led by: Facilitator* The facilitator acknowledges the experience of building community in the classroom and ties it back to why connection matters for learning. Students are invited to exchange contact info with someone new and join a study group through NameDrop before they leave. ▶ Helper line: 'If you want to stay connected with your group, you can tap to swap contacts right here.'

What the instructor receives after each session

- A roster of students who connected, with their name, contact info, and color group
- A set of posted biographies — a physical record of every group formed that day
- Warm color groups that can become ready-made study groups or project teams, referenced by name and shared experience

Game Ideas

WHERE CONNECTION BEGINS

Frequency

WHERE CONNECTION BEGINS

FREQUENCY

Leads into ➜ Community Molecules

Group Size	Time	When	Setting
5 – 6 people	15 – 20 min	Start of class	Open room

WHY USE THIS GAME?

The hardest moment for a new student is walking into a room full of strangers and not knowing what to do next. Frequency solves that instantly — the app gives them a mission the second they sit down. No awkward standing around, no pressure to introduce themselves cold. They're just… playing.

HOW COLORS ARE ASSIGNED

Before class, the system assigns each student's phone one of 5 colors. Every color has exactly 5–6 people. Students don't know their group ahead of time — they discover it by finding others whose phones match.

Red Yellow Green Blue Purple

Each color group = 5–6 people. Adjust the number of active colors based on how many students are expected.

HOW TO PLAY

1. Students open the app as they sit down. Their phone is already showing their assigned color — no instructions needed, curiosity does the rest.
2. They look around for their color match. Students naturally start glancing at phones and approaching others. The search is the icebreaker.
3. The app confirms a full group. Once all 5–6 members of a color group are together, every phone in the group buzzes and holds a steady glow — the 'you found your people' moment.
4. The group gets a conversation prompt on the room screen. The group spends a few minutes on it — light, fun, no wrong answers.
5. Groups stay loose until Molecules begins. Same Wavelength groups become familiar faces when Community Molecules starts.

SAMPLE CONVERSATION PROMPTS

Pick one before class and display it on the room screen when groups form. These are intentionally light — the goal is laughing together, not deep sharing.

- What's a food you could eat every single day and never get tired of?
- What's one place you've always wanted to visit but haven't made it to yet?
- What's a movie or show you've rewatched more than once — and would watch again?
- Are you a morning person or a night owl? Make your case to the group.
- What made you pick this major or this class? Keep it to one sentence.

> ***Facilitator Tip — The Handoff to Molecules: When energy peaks (usually 15–20 minutes in), that's your cue to transition into Community Molecules. Give a 2-minute heads-up, clear the floor, and remind everyone: "The people you just met? They've got your back out there."***

Collective Biography

WHERE CONNECTION BEGINS

COLLECTIVE BIOGRAPHY

A small-group writing game • Leads into ➜ Class Closing

Group Size	Time	When	Setting
4 – 6 people	10 – 15 min	After Molecules	Group tables

WHY USE THIS GAME?

Collective Biography takes the connections the app just created and makes them real on paper. Groups slow down and ask a deceptively simple question: what is actually true about all of us? The search for unanimous statements reveals unexpected common ground and builds shared identity — and the written biography becomes a lasting artifact of a connection that started with a color match.

WHEN TO USE

Collective Biography is the natural third act in the Wavelength experience — run it after Frequency has reduced tension and Community Molecules has formed groups. The color-match groups from the final round of Molecules become the biography groups automatically. Use it when:

- You want to deepen the connection the app created before class transitions
- The group will keep meeting — as a study group or project team — and needs a shared identity
- You need a calm, seated activity to follow the energy of Molecules

> ***Sequencing Note: Frequency forms the group → Molecules energizes it → Collective Biography names it. Run all three in sequence for the full arc.***

RESOURCES NEEDED

App (synced)	Groups are pre-assigned by color from the Community Molecules final round — no reshuffling needed.
Paper (1 per group)	Plain or lined — large format (11x17) works well for group display afterward.
Pens or markers	One per person; colored markers make the biography more visually distinct and personal.
Flat writing surface	A table where the group can huddle together; everyone should be able to see the paper.
Optional: tape	To post completed biographies on a wall for a gallery-walk debrief before closing.
Optional: timer	Keeps the discovery phase on track; a gentle chime works better than a countdown.

HOW TO PLAY

1. Color groups take their seats. When Molecules ends, tell everyone: “Stay with your color group — you’re about to do one more thing together.” Direct each color group to a table.
2. Introduce the mission: “Your color brought you together. Now find out what’s actually true about all of you. Every sentence must be unanimously true — if even one person says ‘not me,’ it doesn’t go in.”
3. Discovery phase (10–15 min). Groups propose and test statements against every member. Push beyond the obvious — shared experiences, values, quirks, and preferences all count.
4. Write the biography (5–10 min). Turn the agreed statements into a flowing paragraph — not a list. One scribe, or one sentence per person in their own handwriting. Name the biography after the group’s color.
5. Share with the room. Each color group reads its biography aloud. Post them on the wall — the room now has a visible record of every group formed today.

> ***Facilitator Tip — The Handoff: When biographies are posted and the room is still buzzing, close the experience. Tell the room: ‘These groups? They found each other today — first by color, then by chaos, now by words. That’s your people.’***

ASK THESE QUESTIONS

Use these during the debrief after biographies are shared. Choose 2–3 based on your group’s energy and time.

During the activity:

- What surprised you — something you expected everyone to share but didn’t, or one you never anticipated?
- Was there anything you wanted to include but couldn’t get unanimous agreement on? What did that reveal?

After sharing biographies:

- What’s one line from another group’s biography that stuck with you?
- If you had to add one more sentence to your group’s biography, what would it be?
- What does it mean to have something in common with people you just met?
- What does this biography say about the kind of study group or team this could become?

VARIATIONS

Color Biography	Each group titles its biography after its color and leans in — ‘The Red Group is a group that…’ The color becomes a team identity that carries into future class sessions.
Cross-Color Mashup	After each group finishes, the app reassigns groups by mixing colors. Each new group writes a second biography — compare the two.
Speed Biography	Give groups only 5 minutes total. Forces quick instincts over careful negotiation. Good if time is short after Molecules runs long.

Negative Space	Groups write a biography made only of things unanimously NOT true: ‘None of us have ever…’ Reveals shared absences as meaningfully as shared experiences.
Future Biography	Write a biography of who this group will be by the end of the semester. What do you hope will be unanimously true?
Gallery Walk Close	Post all biographies before anyone reads aloud. Let the room read silently, then have each group claim theirs — a quiet, memorable close.

Two Truths Trade

WHERE CONNECTION BEGINS

Positive Gossip

A fast roaming game that mixes every color group

Group Size	Time	When	Setting
Whole class	10 – 15 min	Warm-up or mid-class	Open room

WHY USE THIS GAME?

Positive Gossip gets every student talking to people outside their color group fast. Instead of staying in a fixed cluster, students move one-on-one, swap quick compliments about other people in the class, and try to remember who said what. It rewards curiosity and gives quieter students a low-stakes, structured reason to start a conversation.

HOW TO PLAY

1. Each student opens the app and enters two true things about themselves (the app stores them privately).
2. On ‘Go,’ students pair up with anyone whose phone color is different from theirs and trade their two truths out loud.
3. After 60 seconds, the facilitator calls ‘Swap!’ and everyone finds a new partner of a different color.
4. Run 4–5 rounds. Each student should meet at least one person from every color.
5. To close, the facilitator calls out a color and asks: ‘Who can name one truth you learned from a [color]?’ Hands go up and the room shares.

> ***Facilitator Tip: Use Two Truths Trade as a five-minute warm-up at the start of any later class session. Because it needs no setup beyond the app, it’s the easiest way to keep color groups feeling familiar week to week.***

Concept Clusters

WHERE CONNECTION BEGINS

CONCEPT CLUSTERS

A content-review game that ties connection to the course material

Group Size	Time	When	Setting
4 – 6 people	15 – 20 min	Review / mid-semester	Group tables

WHY USE THIS GAME?

Concept Clusters is the bridge between social connection and learning. Color groups work together to connect their assigned color to ideas, terms, or examples from the course — turning a get-to-know-you tool into an active-recall study session. It's ideal once groups already know each other and you want the connection to start paying off academically.

HOW TO PLAY

1. The facilitator assigns each color group a topic, unit, or theme from the course (the app can display it on each group's phones).
2. Groups have 5 minutes to brainstorm everything they know about the topic — key terms, examples, formulas, debates — on their sheet.
3. Groups then build a 'cluster': a quick map linking their items together, showing how the ideas relate.
4. Each color group presents its cluster to the room in 90 seconds. Other groups add one connection they noticed.
5. The facilitator closes by linking the clusters together, showing how the units of the course connect — just like the groups did.

VARIATIONS

Quiz Relay	Each group writes two review questions, then passes them to the next color group to answer against the clock.
Misconception Hunt	Groups list one common misunderstanding about their topic and the correct version — great before an exam.
Cross-Cluster Link	Two color groups merge and must find three links between their two topics.

> ***Facilitator Tip: Concept Clusters works best a few weeks in, once color groups are comfortable. It quietly converts the Wavelength groups into study groups — the connection now has an academic payoff.***

Story Relay

WHERE CONNECTION BEGINS

STORY RELAY

A creative, low-pressure group game built on collaboration

Group Size	Time	When	Setting
5 – 6 people	10 – 15 min	Anytime / energizer	Group tables

WHY USE THIS GAME?

Story Relay gives color groups a shared creative goal with zero academic pressure — perfect for breaking tension or re-energizing a long class. Each person adds one line to a collaborative story, so everyone contributes and no one is on the spot for long. The results are usually funny, which bonds the group fast.

HOW TO PLAY

1. Each color group gets one sheet of paper and a starting line from the room screen (e.g., 'On the first day of class, nobody expected…').
2. The first student writes one sentence continuing the story, then passes the sheet to the next person in the group.
3. Each student adds exactly one sentence. The sheet goes around the group two or three times.
4. When time is up, one volunteer reads the finished story aloud to the group — or to the whole room.
5. Groups vote (via the app) on the funniest, most creative, or most chaotic story.

VARIATIONS

One-Word Relay	Each person can add only one word at a time — faster, sillier, and even lower pressure.
Theme Draw	The app gives each group a random theme (mystery, sci-fi, campus life) to shape their story.
Course Cameo	Every story must work in at least three terms from the course — playful review through storytelling.

> ***Facilitator Tip: Story Relay is your go-to when energy dips. It needs only paper and a prompt, runs in ten minutes, and almost always ends in laughter — the fastest way to make a color group feel like a team.***

Next Steps

WHERE CONNECTION BEGINS

Next Steps

Wavelength works best when the connections made in one session carry into the rest of the semester. Use these ideas to keep color groups alive after the first class:

- Turn color groups into standing study groups or project teams for the term
- Open any later class with a 5-minute warm-up game (Two Truths Trade or Story Relay) to keep groups familiar
- Use Concept Clusters before exams so the social groups become review groups
- Encourage students to use NameDrop to stay connected outside class
- Rotate colors mid-semester with a Cross-Color Mashup so students meet new classmates

Troubleshooting

WHERE CONNECTION BEGINS

Troubleshooting

A student's phone won't show a color	Have them refresh the join link or rejoin from the posted QR code. The facilitator can manually assign a color from the facilitator view.
A student has no phone	The facilitator can pair them with a neighbor for shared color, or hand out a backup printed color card from the kit.
Groups aren't forming evenly	Re-balance group sizes in the app before the round, or reduce the number of active colors for a smaller class.
Energy is too low	Switch to Community Molecules or Story Relay to get students moving and laughing again.
Energy is too high to focus	Transition to a seated game — Collective Biography or Concept Clusters — to settle the room.
The room screen fails	Read prompts aloud or post them on a whiteboard; the app can also push prompts directly to phones.

FAQs

WHERE CONNECTION BEGINS

FAQs

Do students need to download an app?

They open a join link or scan a QR code on their phone — no app store download required for the prototype.

What if my class is larger than 100?

Contact us about a custom plan; the color-group system scales by adding more colors and helpers.

Can I use Wavelength more than once?

Yes — it's designed for repeat use. Reuse color groups across sessions or reshuffle them to mix students.

Does it work for online or hybrid classes?

The connection games are built for in-person rooms, but Frequency and Two Truths Trade can be adapted for breakout rooms.

Can I tie the games to my course content?

Yes — Concept Clusters, Quiz Relay, and Course Edition variations fold the day's material into the groups.
